

Amber D. Riley, MS, RDH, FAAFS

My in-office training program covers non-surgical laser applications for dentists and dental hygienists. I will teach the safety, physics, and visualization indications for diode dental lasers and then, your office will learn by hands-on training using your diode laser equipment. I will create a training program customized for your office needs, use and provider experience.

Take your clinical practice to a higher level, improve your clinical results and increase patient satisfaction and office production.

Objectives:

- Demonstrate and apply basic laser safety and physics.
- Learn clinical applications of dental diode lasers.
- Use a dental diode laser in a clinical oral environment.
- Team troubleshooting; discuss barriers to implementation, scheduling adjustments, and return on investment.
